Dancing Saguaros Pattern Bundle

Danielle Wickes Jewelry

For Loom and Peyote

December 2018

This Pattern bundle contains two loom pattern versions and two peyote pattern versions, but you really can make it your own and mix and match the pattern repeats and extras for your own design. I've tailored the patterns to show how I did each closure. There are many closure options which work great for loom and peyote stitch bracelets. I've presented examples of my favorites here.
These are end tubes, see page 4.
Button with Seed Beaded Loop

End bars are a great way to finish off both peyote and loom bracelets. There are several types. They look great and can be adjusted to fit by shaping down to form a tab (in peyote) or by simply folding your piece over and square stitching (loom) or peyote stitching for peyote pieces to the back.

Slide Tube End Bar

Peyote with slide tube end bar

End Bar

May favorite technique is to create a tab that I sew over a piece of leather cord tied into button loops. I then sew a button on the other end (peyote) or loom it in place by replacing the center bead with the button shank for two to three rows.

Loomed Button

Create a tab to fold over and sew down your leather.

In this peyote design, I again created a tab to sew over the leather. I have shown how to create this tab in the peyote pattern.

Here the button has been sewn onto the top or the end of the peyote.

Another handy method to try is using end tubes. These work best with loomed pieces. They add a very professional finish to a piece.
Patterns shown here are Danielle Wickes Jewelry Patterns
There are other variations out there, including these handy e-hook clasps, as well as countless other ways to create a button and loop closure.

E-hook clasps, 3/4 inch

20mm e-hook

The Peyote Patterns

Each of the two patterns are even-count and can be made with any beads you like and in any configuration. You simply adjust the number of pattern repeats. You can also mix and match your cacti versions. My examples have used size 11 delicas and size 10 delicas. If I was making a full length version of the pattern using size 11, I would include 5 cacti, for example. Lots of possibilities here to make it your own. You can add other symbols, such as moon phases (see page 8).

The Loom Patterns

As with the peyote patterns, the possibilities to adapt and personalize the loom pattern are endless. Here I have created three versions, suited to the closure style I had planned and the style I wanted. All of the below pictured bracelets were made with Size 11 delicas, but could easily be made with any other bead type and adjusting dimensions accordingly.

You can add moon phases and other symbols to your loomed work. The sky is the limit! Lots of bead retailers websites have free, printable seed bead pattern graph paper available. I first started there and with graph paper. Now I'm using Bead Tool 4 to create patterns, which I highly recommend.

I hope so much that you have enjoyed this pattern bundle! If you would like the word charts for any of these patterns, I do have those available , just message me and I'll get them to you.

Happy Beading!
